Christina Cangelosi**RESPONSE**

In response to the Office Action dated January 5, 2006 the following remarks are submitted for entry in the above referenced case. A petition and fee for a three (3) month extension of time is being submitted herewith.

In the office action, claims 1-9, 11-15 and 17 are pending.

Applicants first note with appreciation the withdrawal of the previous rejections under 35 USC 102(e) and 103(a).

Claims 1-5, 11-13, 15 and 17 are rejected under 35 U.S.C. 103(a) as unpatentable over Boeckeler (4,377,457). These rejections are respectfully traversed. As noted in the office action, the polyester polyol in Boeckeler is not specifically described as one obtained from a fatty acid or ester. The office action then points to columns 2 and 3 of Boeckeler for a disclosure of oxidatively drying resins from tall oil fatty acids, including an extended urethane acrylate resin, and concludes it would be obvious to use such resins as the polyester with a polythiol and a photoinitiator. In response, Applicants note that these resins are not used as oxidatively drying resins
